Websites require constant maintenance to run smoothly. If you find that keeping up with your website is taking time away from other important parts of your business, consider our WP³ plan. You’ll get all the benefits of our basic hosting plan, plus:

- **Backups**: We take frequent on- and off-site backups, so your website is safe no matter what. If we have to restore your website, we’ll do so for a small fee.
- **Updates**: Websites need to be updated constantly. When they aren’t, they slow down and become targets for hackers. We perform monthly updates to keep your website fast and secure.
- **Optimization**: We record your website’s speed and make the necessary changes to ensure it runs as fast as possible.
- **Monitoring**: We constantly watch your site for signs of malicious activity. If we find any, our web experts quickly handle the issue, so your site can go on advertising your business.
- **Reports**: Whenever we make changes to your website, our technicians create a custom report that gets sent straight to you. That way, you always know what’s going on.
- **Peace of Mind**: With our WP³ plan, we take care of everything for you. We spend our time on your website so you spend your time doing what you do best: your job.
- **It’s secure**: We utilize a state full packet inspection firewall with ACL and SNORT on all our servers. Each server has regularly updated endpoint security/anti-virus software. Additionally, we utilize a UPS battery backup (in-line) with a natural gas generator to handle significant power outages, so your website is safe no matter what.
- **It’s managed**: When you need something changed, you call, we pick up, and we change it. You’ll talk to people, not robots.
- **It’s real people**: All of our hosting clients get on-site customer support. Whenever you call with an issue, our experts will answer and work with you until your issue is resolved. You’ll talk to humans, not robots.
- **It’s customizable**: You can host your website, email, and DNS here. Or you can host just one of them. Or any combination of the three. We even include mail filtering if you host your email here. We’re flexible, so you can pick the parts that work for you and leave behind the rest. We can also provide SSLs and dedicated IP addresses upon request.
- **It’s unlimited**: When you host your website with us, you get unlimited bandwidth from our lightning-fast fiber connection.
